To reduce mosquito-borne diseases like West Nile Virus...

Eliminate Mosquito Breeding Sites Where YOU Live!

A six-inch puddle or saucer of water can produce 1000 mosquitoes a week! Dump it, drain it or clean it up.

Check for these problem areas!

- 1) Clean gutters regularly.
- 2) Eliminate debris that holds water.
- 3) Repair leaky faucets.
- 4) Maintain pools and spas; keep water from pooling on covers.
- 5) Drain excess water from plant pots and saucers.
- 6) Change birdbaths and water bowls for pets twice a week.
- 7) Prevent water from collecting in toys and equipment by turning upside down or storing inside.
- 8) Keep yard waste out of storm drains.
- 9) Avoid overwatering.

More Handy Tips

- ✓ **Water landscape deeply and infrequently** — *an inch a week is enough!* Avoid run-off that creates breeding sites.
- ✓ **Check French drains**; if water collects, treat with larvicide, i.e. *Mosquito Dunks*, available at home improvement and garden centers.
- ✓ **Check water meter box** for leaks and standing water; treat with *Mosquito Dunks* if needed.
- ✓ Disease-carrying *Culex* mosquitoes are active from dusk to dawn. **Avoid being outdoors during those hours or use a repellent** with one of the following active ingredients: 7% Picaridin, DEET or Oil of Lemon Eucalyptus.
- ✓ **Trouble with daytime, nuisance mosquitoes?** Check your neighborhood for overlooked containers of standing water!

THINK WET! Wear repellent...Eliminate standing water...Treat where you can't drain!
